

Sustainable water and settlement development through Environmental engineering (Seminar)

Guest lecturer: Maria Baumgartner,
University of Natural Resources and Life Sciences, Vienna

Get the information!

- How can flood risks be sustainably reduced?
- Can zoning plans and adapted constructions lead to flood-proof settlements?
- Is it possible to protect river banks with plants only?
- How do hydromorphological river assessments work?
- What are the objectives of the EU Water Framework Directive?

Bring along:

Examples (photos, newspaper articles, ...) of rivers and flooded or flood secure settlements in Serbia to discuss

Time & Course content

20/2/2018, 11:00 - 13:00

Environmental engineering and water-related sustainability management

21/2/2018, 11:00 - 14:00

Environmental engineering in preventive flood protection

22/2/2018, 11:00 - 14:00

Environmental engineering in active flood protection

Location & contact

The seminar will take place at the Faculty of Civil Engineering and Architecture. For further information send an e-mail to maria.baumgartner@boku.ac.at.
